DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, a WDM optical communication system and every other details listed in the claims must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities: there are no separate headings for each section of the specification. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

(a) TITLE OF THE INVENTION.

(b) CROSS-REFERENCE TO RELATED APPLICATIONS.

(c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR
DEVELOPMENT.

(d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A
COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer
program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)),
and tables having more than 50 pages of text are permitted to be
submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a).
"Microfiche Appendices" were accepted by the Office until March 1, 2001.)

(e) BACKGROUND OF THE INVENTION.

(1) Field of the Invention.

(2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.

(f) BRIEF SUMMARY OF THE INVENTION.

(g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).

(h) DETAILED DESCRIPTION OF THE INVENTION.

(i) CLAIM OR CLAIMS (commencing on a separate sheet).

(j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

(k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A

“Sequence Listing” is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required “Sequence Listing” is not submitted as an electronic document on compact disc).

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 1-5 are rejected under 35 U.S.C. 102(a) as being anticipated by Grubb (WO 00/49721).

Regarding claim 1, Grubb discloses a WDM optical communication system (fig. 1 and 2), comprising input means and output means for an optical signal (14, fig. 1 and 2), an optical fibre path connecting signal-transmissively said input and output means (28, fig. 1 and 2), wherein the optic signal is amplified by means of Raman amplification and said optical fibre path comprises at least one Raman amplifier (12; fig. 1, 2, 3, p. 10, lines 32-38 and p. 11, lines 1-6), further comprising WDM means for coupling at least two polarized pump radiation wavelengths with wavelengths less than the signal radiation wavelength into said Raman amplifier (36, fig. 3, p. 11, lines 29-38 and p. 12, lines 31-33), characterized in that one pump radiation wavelength has a selected different polarization with respect to the polarization of the other pump radiation wavelengths (p. 11, lines 35-37).

Regarding claim 2, Grubb discloses that the Raman amplification is a distributed Raman amplification (p. 6, lines 14-18 and p. 7, lines 12-29).

Regarding claim 3, Grubb discloses that the Raman amplification is a localised Raman amplification (p. 6, lines 18-21 and p. 7, lines 12-29).

Regarding claim 4, Grubb discloses that at least one pump radiation wavelength has a polarization which is orthogonal with respect to the polarization of at least one other pump radiation wavelength (p. 11, lines 29-38).

Regarding claim 5, Grubb discloses that the polarization of the pump radiations of the lower part of the pump wavelength band is orthogonal with respect to that of the upper part (p. 8, lines 28-35, p. 11, lines 29-38 and p. 18, lines 1-10).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mollenauer (US Pat. No. 4,881,790) is cited to show an optical communications systems with Raman amplification of the signal radiation comprises a broadband pump radiation sources and polarization maintaining optical fiber as the transmission medium.

Baldwin (US Pat. No. 4,570,081) is cited to show an isolated pump in a double pass pump Raman oscillator and optimum conversion of pump energy in a Raman oscillator and amplifier.
